

Every boat has a different layout. Every user has different requirements. Every installation needs special care. Knowing that, FaRo Advanced System has developed the philosophy of "electronics on-demand": hardware and software are designed to satisfy customer's requirements and the products can be personalized at any level.

- [FaRo](#) - the modular platform in charge of decoding instruments data, managing math relations and outputting numbers on the displays
- [FaroManager](#) - the software allowing an easy remote management of FaRo and providing the connection with the most used navigation software
- [Remote Display](#) - the software that, installed on a PDA or on a Windows compatible device, brings the navigator's numbers to other team members
